

Colleague & Customer Service · Wealth & Insurance

The automation, tools and insight behind our colleagues and customers.

Four labs, one front door. Tell us what you need and we route it to the right team. How can we help?

Ask a question
About any automation, app, agent or this site. Reply in 2 working days.

Report a problem
Something isn't working as it should. Triage in 1 working day.

Change something
What it does, when it runs, or a system it uses is changing. Sized in 5 working days.

Bring us something new
A process or idea worth automating. Qualified in 10 working days.

Not sure where to start? Ask the CCS agent.
It knows every live solution across the four labs, can tell you whether something similar already runs, and starts the right request for you.

Front door

How can we help?

Four ways in, for any lab, team, automation, app, agent or service. You don't need to know who owns it: we route it to the right team and you follow it below.

Is something stopping customers or colleagues right now? Raise an incident in ServiceNow to **CCS-Service-Desk**. That reaches the on-call engineer for the right lab straight away.

[Raise an incident](#)

**Ask a question**
About any automation, app, agent or this site. Reply in 2 working days.

**Report a problem**
Something isn't working as it should. Triage in 1 working day.

**Change something**
What it does, when it runs, or a system it uses is changing. Sized in 5 working days.

**Bring us something new**
A process or idea worth automating. Qualified in 10 working days.

Not sure which route? Ask the CCS agent.

Describe your need in a sentence or two. It checks what already runs across every lab, sizes it roughly and starts the right request.

[Ask the CCS agent](#)

Your requests

[All your requests](#)

Request ▼	Type ▼	Lab ▼	Team ▼	Status ▼	Raised ▼
Claims bot skipped cases with a missing policy number	Problem	Automated Operations	Automated Services	In progress	29/09/2026
Run the KYC refresh overnight instead of 9am	Change	Automated Operations	Automated Services	With us	01/10/2026
Case summary panel: add the claim history tab	Change	Colleague Tooling	Case Tools	With us	02/10/2026
Death claim notifications	New idea	Routing	Routing	New	05/10/2026

One list for every lab. You only see the requests you raised. "Routing" means a Product Owner is choosing the right team.

What happens next

- We read it** and route it to the right lab and team, usually the same day.
- That team replies** within the time shown on each route above.
- You follow it** in "Your requests": the team and status change as it moves.
- We close it with you** and record what we did.

Talk to a person

[Name]
Business Platform Lead · priorities and value

[Name]
Technology Platform Lead · platforms and standards

[Name]
Platform Product Owner · routing

▼ Which route do I pick?

If it already exists and is wrong, report a problem. If it exists and you want it different, or something it depends on is changing, change something. If it doesn't exist yet, bring us something new. If you're not sure, ask a question and we'll route it.

► Who decides which team takes it?

► Will it cost my area anything?

Colleague & Customer Service

[Front door](#) [Trust and controls](#) [How we count value](#)

Trust and controls · every lab

Safe to rely on, and easy to evidence.

Agents prepare. People decide.

Under the Data Use and Access Act, decisions with a significant effect on a customer cannot be made by automation alone. Our agents gather the facts, check them against our own data and prepare the case. A colleague makes the determination, and the record shows both.

We design to this from the start. If a design would let an automation decide, it does not pass our first gate.

How every automation is controlled

Signed off before build

Every use of AI goes through Responsible AI review before build starts. Every automation passes six gates, each needing evidence, before it goes live.

Recorded as it runs

Every action is logged with its inputs and outputs. For agents, the colleague's decision is recorded alongside the agent's recommendation.

Watched once it's live

Our Service Team monitors every automation and its telemetry, so we usually spot a problem before your teams do.

What Risk and Audit can see

Evidence	Where it comes from	Available
Design and sign-off	Gate records and Responsible AI review	Any time
What ran, and when	Run logs for every automation	Any time
Agent recommendation and colleague decision	Decision records	Any time
Value and cost	The estate dashboard	Refreshed daily

▼ Can an agent make a decision about a customer?

No. Agents prepare and recommend. A colleague decides, and both are recorded.

► Who owns an automation once it's live?

► What happens when a system it uses changes?

How we count value

One definition of value, for every lab.

Every value figure on every CCS site comes from the same dataset and is counted the same way. Finance agreed these rules on 18 September 2026.

What counts

Capacity returned	Live volume × minutes saved per case, from the timed baseline taken before build. Shown as hours and as FTE (one colleague's working year, 1,650 hours).
Cost avoided	Spend that would otherwise have happened, such as overtime, temporary staff or third-party fees, evidenced by the cost centre that would have paid it.
Risk reduced	Shown separately, never added to value: fewer errors, breaches or complaints, with the measure the business area uses.
Cost to run	People, licences, infrastructure and the hub recharge, allocated to each solution by run hours.

Counted once it is live and measured

No value is claimed for a solution in build or test.
Counting starts the month after release, from real
volumes.

Stopped if it stops holding

If volumes fall or a process changes, value is recalculated. A solution that no longer saves time stops counting.

Value per case, not projections

Forecasts appear in the pipeline as expected value,
never in delivered value.

Worked example: claims triage

Cases this year	186,400
Minutes saved per case	12 (14 by hand, 2 automated)
Capacity returned	37,280 hours, 22.6 FTE
Value at £19.60 an hour	£731k
Cost to run	£34k (£0.18 a case)
Return	21.5x

 **CCS agent**
Answers from every CCS site and the Solutions catalogue

Hi. I can tell you whether we already run something similar, which of the four routes fits, and what happens next.

Can you automate my process?

Something has stopped working

What runs in Pensions?

We rekey around 2,000 death claim notifications a month from email into the claims system. Each one takes about 12 minutes. Can you help?

Yes, this fits **Bring us something new**. This team already runs a digital worker for death claim notifications in Insurance, so this may be an extension rather than a new build ¹.

Rough size: 2,000 × 12 minutes is 400 hours a month, about 2.6 full-time colleagues.

What happens next: a Product Owner reads it within 10 working days and comes back to you with a yes, a no or a question ².

Raise it as a new idea

I'll create the request with what you've told me and show you the link. You can edit it before we pick it up.

1 Solutions catalogue · Death claim notifications

2 Front door · What happens next

The agent prepares the request. A person decides whether we take it on.
