Automated Operations Lab · Colleague & Customer Service

Every routine step handled by automation or an agent. Colleagues only touch the decisions that need them.

The Lab brings together the teams building the next generation of automation for Wealth and Insurance. Each team owns its own work; the Lab owns the rules, the programme and the evidence.

Agent Engineering

Building

Three rules every team follows

Agents prepare, people decide

No agent makes a determination about a customer. It gathers, checks and recommends. A colleague decides.

Prove it before it goes live

Every new agent runs against real cases and is compared with what actually happened before it touches a customer.

Build once, use everywhere

Capabilities like checking a customer's details or drafting a letter are built once and reused across journeys.

Automated Operations Lab

Three teams, one Lab.

Each team owns its own work, people and numbers. The Lab sets the rules every team follows and runs one programme across all three.

Automated Services

Digital workers and Power Platform apps across Insurance, Pensions and Investments, and the Service Team that keeps them running.

37 people	142 live solutions	Blue Prism, Power Platform runs on
---------------------	------------------------------	--

Product Owner: [Name] · Engineering Lead: [Name]

[Team site](#) [Contact this team](#)

Agent Engineering

Builds the Lab's agents on Google Cloud, and runs shadow testing before any agent touches a customer.

11 people	11 live solutions	Google Cloud runs on
---------------------	-----------------------------	--------------------------------

Product Owner: [Name] · Engineering Lead: [Name]

Who owns what

If you need	The team is
A digital worker changed, fixed or built	Automated Services
An app or workflow in Power Platform	Automated Services
An agent to prepare cases or draft content	Agent Engineering
To know which process to automate next	Process Intelligence
A process map for something still being designed	Process Intelligence

Not sure? Use the front door; we route it for you.

The programme: what every team in the Lab is working on.

Read left to right: where the next work comes from, how we understand it, what runs the routine step, and how we prove it worked. Working means in use today; building means in progress; next means agreed, not started.

Automated Operations Lab

The tools we use and the skills we bring.

The tools every team in the Automated Operations Lab uses, and the skills behind them. This is the platform Tools list filtered to this Lab; the full list is on CCS.

Tools

Every tool across CCS

Tool	Vendor	What we use it for	Status	Licence owner
Blue Prism	SS&C Blue Prism	Digital workers for high-volume, rule-based steps	Live	Technology Platform Lead
WorkHQ	SS&C Blue Prism	The next generation of Blue Prism	Next	Technology Platform Lead
Blue Prism Process Intelligence	SS&C Blue Prism	Task and process mining	Live	Lab Engineering Lead, Automated Operations
Power Platform	Microsoft	Apps, workflows and Copilot Studio	Live	Technology Platform Lead
Copilot Studio	Microsoft	The CCS agent and Lab agents	Pilot	Business Platform Lead
Google Cloud	Google	Agents, workflows and reusable services	Pilot	Technology Platform Lead
Dynatrace	Dynatrace	Monitoring and telemetry	Live	Lab Engineering Lead, 24x7 Services
Azure DevOps	Microsoft	Code, pipelines and releases	Live	Technology Platform Lead
Microsoft 365	Microsoft	SharePoint, Teams and these sites	Live	Business Platform Lead

Skills in the Lab

We grow skills on the Dreyfus scale: Novice, Advanced beginner, Competent, Proficient, Expert. Competent is the baseline for anything we put live; the chart shows how many people are Proficient or Expert in each skill.

Each team's full picture, including who is learning what, is on its private team site.

People at Proficient or Expert

By skill, across every team in the Lab

Microsoft Power BI

They apply to every digital worker, app and agent the Lab builds. Risk and Audit can see the evidence for each one on the solution page.

No agent makes a determination about a customer. It gathers, checks and recommends; a colleague decides, and the record shows both.

Every new agent runs unseen against real cases and is compared with what actually happened before it touches a customer.

Capabilities like checking a customer's details or drafting a letter are built once as services and reused across journeys.
