

Every service watched and every incident fixed fast, so colleagues and customers barely notice.

Across the Lab

All teams in the Lab

Team	Roles
Monitoring	18 people · 58 services
Incident Response	22 people · 24x7 rota
Resilience	11 people · 31 plans
Release Management	10 people · 214 releases

The programme

The diagram illustrates four categories of work items, each represented by a light gray box. Inside each category box are one or more white boxes representing individual items. Each item box contains a title and a status label in a colored pill.

- Sense 2**
 - Alert noise reduction (Building)
 - Service health map (Working)
- Understand 1**
 - Customer impact scoring (Assessing)
- Act 2**
 - Self-healing run books (Building)
 - Major incident bridge (Working)
- Prove 1**
 - Recovery testing (Working)

How every team in the Lab works

Anything stopping a customer is fixed before anything else, whoever owns it.

Every incident has one named owner from first alert to closure.

Every critical service is restored in a test at least twice a year.

Who leads the Lab

The diagram shows two roles: PO (Product Owner) and EL (Lab Engineering Lead). PO is represented by an orange circle and is responsible for priorities, programme and value. EL is represented by a dark blue circle and is responsible for platforms, standards and delivery.

24x7 Services Lab

Four teams, one Lab.

Each team owns its own work, people and numbers. The Lab sets how every team works and runs one programme across them.

Monitoring

Watches every service and automation on the platform, and raises the alarm before customers notice.

18 people

58 services
looks after

Dynatrace, Splunk
runs on

Product Owner: [Name] · Engineering Lead: [Name]

[Team site](#) [Contact this team](#)

Incident Response

On call around the clock for anything stopping colleagues or customers.

22
people

24x7 rota
looks after

ServiceNow
runs on

Product Owner: [Name] · Engineering Lead: [Name]

[Team site](#) [Contact this team](#)

Resilience

Recovery plans and regular recovery testing for every critical service.

11
people

31 plans
looks after

Azure, GCP
runs on

Product Owner: [Name] · Engineering Lead: [Name]

[Team site](#) [Contact this team](#)

Release Management

Safe, scheduled changes into production for every Lab.

10 people

214 releases

Trust and controls

How we count value

The programme: what every team in the Lab is working on.

The diagram illustrates four pillars of resilience, each with specific initiatives and their current status:

- Sense 2**
 - Alert noise reduction**: Groups related alerts so engineers see one problem, not forty messages. Status: **Building**.
 - Service health map**: Every service and its dependencies on one live map. Status: **Working**.
- Understand 1**
 - Customer impact scoring**: Estimates how many customers an incident affects in the first five minutes. Status: **Assessing**.
- Act 2**
 - Self-healing run books**: Common fixes, such as restarting a stuck queue, run automatically and tell the on-call engineer. Status: **Building**.
 - Major incident bridge**: One call, one owner, one status page for every priority 1 incident. Status: **Working**.
- Prove 1**
 - Recovery testing**: Critical services restored in tests twice a year, timed against target. Status: **Working**.

24x7 Services Lab

The tools we use and the skills we bring.

The tools every team in the 24x7 Services Lab uses, and the skills behind them. This is the platform Tools list filtered to this Lab; the full list is on CCS.

Tools

Every tool across CCS

Tool	Vendor	What we use it for	Status	Licence owner
ServiceNow	ServiceNow	Incidents, knowledge and service requests	Live	Lab Engineering Lead, 24x7 Services
Dynatrace	Dynatrace	Monitoring and telemetry	Live	Lab Engineering Lead, 24x7 Services
Splunk	Cisco	Log search and alerting	Live	Lab Engineering Lead, 24x7 Services
Azure DevOps	Microsoft	Code, pipelines and releases	Live	Technology Platform Lead
Microsoft 365	Microsoft	SharePoint, Teams and these sites	Live	Business Platform Lead

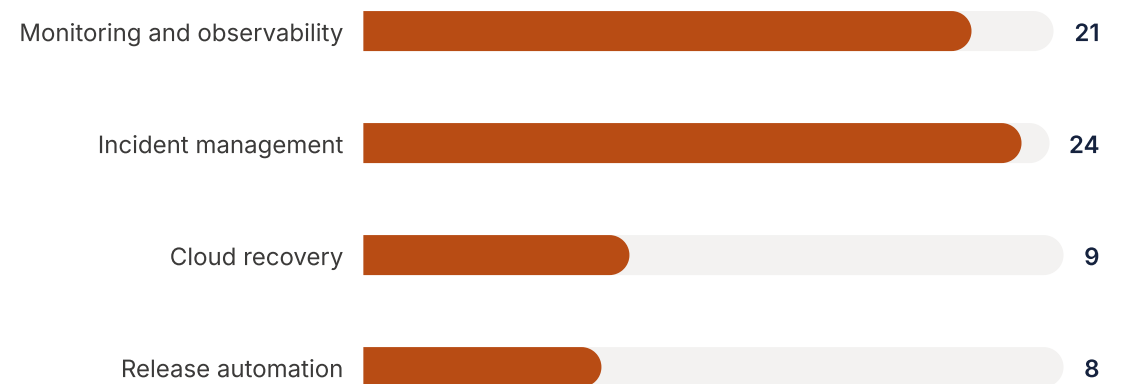

Skills in the Lab

We grow skills on the Dreyfus scale: Novice, Advanced beginner, Competent, Proficient, Expert. Competent is the baseline for anything we put live; the chart shows how many people are Proficient or Expert in each skill.

Each team's full picture, including who is learning what, is on its private team site.

People at Proficient or Expert

By skill, across every team in the Lab

Microsoft Power BI

How every team in the Lab works.

1 Customers first

Weekly incident review; priority 1 reviews within five working days.

2 One incident, one owner

Monthly sample of closed incidents.

3 Practise recovery

Resilience calendar reviewed quarterly by Risk.

How we count value

News from across the Lab.

Posts from every team in the Lab, newest first. Each team posts on its own site; they all appear here.

Incident volumes down 22% after the monitoring refresh

Grouping related alerts cut noise by two thirds, so engineers reach the real problem faster.
