

Bring us a problem. We will test new ways to solve it, with you.

Demos, results and what happened next, including the ideas we stopped.

▲ from 9 business teams

Test

The smallest thing that answers the question, tried with the people who do the work and measured against today. Stopping is a good result; we publish what we learned either way.

Ideas

Got an idea? Raise it here.

Ideas come from the people closest to the work. Tell us the problem in your own words; you do not need to know which technology might solve it.

What makes a good Frontier idea

- A real problem a customer or colleague has today
- You can say what better looks like: a better service, less time, less risk
- You can say who it affects and roughly how often
- Something small enough to test in six weeks
- Any technology, a new way of working, or both: we choose what fits the problem

What happens next

1. The Frontier panel reviews new ideas every fortnight.
2. You hear back within 10 working days: chosen, shortlisted or parked, with the reason.
3. If it is chosen, you join the experiment as the problem owner.

Raise an idea

Opens the Ideas form · about 3 minutes

Ideas raised

All ideas

Like the ideas you would use. Likes help the panel see what colleagues want most; they do not decide on their own.

The figure displays a 2x4 grid of cards, each representing a different training topic. Each card includes a category label (e.g., 'Customer letters', 'Chosen', 'Shortlisted'), a title, a sub-category (e.g., 'Pensions', 'Insurance'), and a popularity score indicated by a thumbs-up icon and a number. The cards are arranged in two rows and four columns.

Category	Topic	Sub-category	Score
Customer letters	Letters customers can read first time	Pensions	41
Chosen	Know why a customer is calling before we answer	Insurance	37
Shortlisted	Draft the file note from the call	Investments	33
Process	Check a pension pack is complete on arrival	Pensions	28
Colleague time	Show handlers which cases are about to breach	Insurance	24
Shortlisted	Translate letters into Welsh automatically	Pensions	17
Learning	Practise difficult calls with a simulated customer	Insurance	15
Shortlisted	Know why a customer is calling before we answer	Insurance	37

▼ Do I need to be technical?

No. You bring the problem and what good would look like. Frontier brings the technology and the people to build and test it.

► **Will it take me away from my day job?**

► What if my idea is not chosen?

► Can we use real customer data?

Experiments

Everything we are testing, and what we decided.

Every experiment moves left to right. Most take six to eight weeks from first look to a decision. Select a card to see the problem, what we tested and what we found.

How an experiment runs

1 TO 2 WEEKS Explore

Is the problem real, and what outcome would fix it? We talk to the people who have it, check what every Lab already runs, and only then choose what to test, whatever the technology.

UP TO 6 WEEKS Test

We build the smallest thing that answers the question and try it with colleagues on safe data, measuring against what happens today.

1 WEEK Decide

With the business owner: hand it to a Lab to build properly, stop, or test again with a change. We publish the result.

Safe to try

- Every experiment runs in the Frontier sandbox, never in production.
- Synthetic or masked data unless Data Protection has signed off.
- Agents prepare and colleagues decide, in tests as in live work.
- Responsible AI review before any test that uses a language model with colleagues.

What a decision means

Decision	What happens
Hand over	A Lab takes it on through the CCS front door, with our evidence attached
Test again	One change, one more short test, then decide
Stop	We publish what we learned and why, and close it

Experiment · Test

Voice notes to case summaries

Claims handlers dictate a short voice note after each call, and a language model drafts the case summary for them to check and save.

About this experiment	
Stage	Test
Started	8 September 2026
Decision due	24 October 2026
Outcome	Faster for handlers, and a fuller, consistent record of every claim
Measured by	Minutes per summary; share of drafts accepted with small edits
Problem owner	[Name], Claims, Insurance
Frontier lead	[Name]
Technology	Speech to text, language model
Data	Synthetic call recordings
Likely home	Automated Operations Lab

The problem

Handlers spend around nine minutes after each call writing the case summary, and summaries vary in what they include. Across the claims team that is about 1,400 hours a month.

What we are testing

If handlers dictate a voice note and the model drafts the summary, will a summary take under three minutes, and will handlers accept at least eight in ten with only small edits?

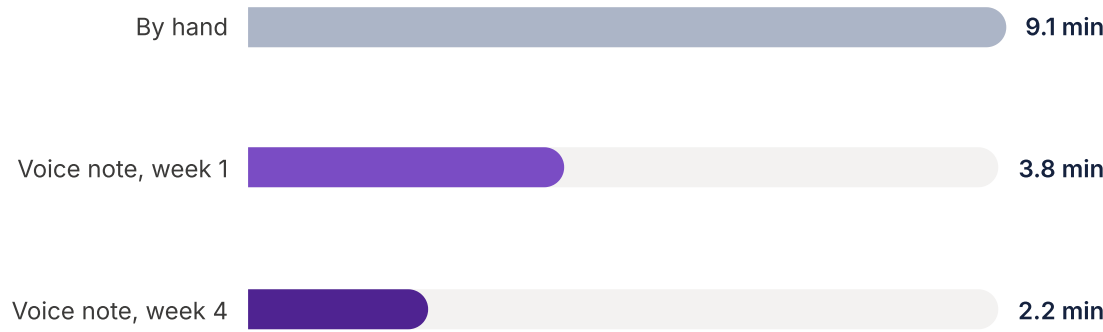

What it does not do

It does not decide anything about the claim. The handler checks, edits and saves every summary.

How it is going

Minutes to write a case summary

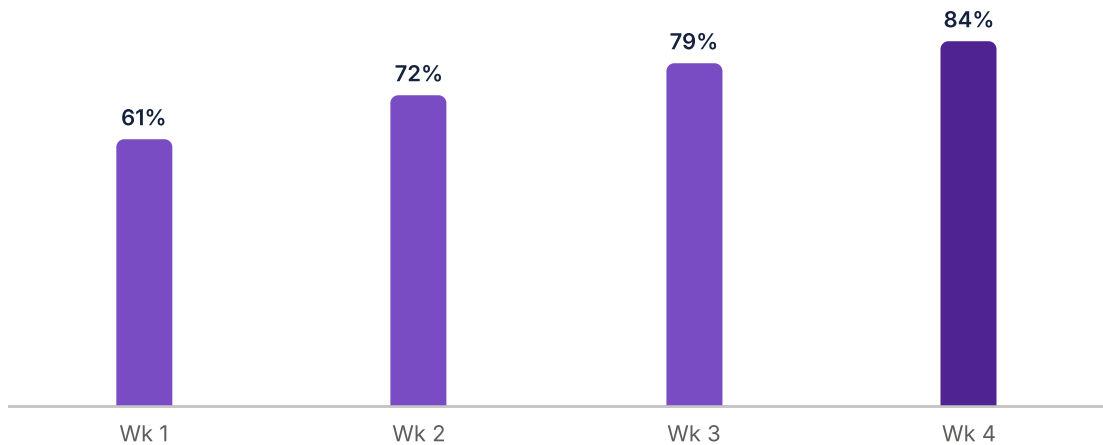

Median, by hand against with a voice note

Microsoft Power BI

Summaries accepted with small edits

Share of drafts, by week · target 80%

Microsoft Power BI

What we have learned so far

2 Oct

Week 4: 84% of drafts accepted with small edits, above the 80% target. Edits are mostly policy numbers read out wrongly; we are testing reading them back to the handler.

18 Sep

Week 2: handlers preferred shorter voice notes than we expected. We changed the prompt to work from 20 seconds of speech.

8 Sep

Started with six handlers from the motor claims team, on synthetic call recordings in the Frontier sandbox.

Come and work with us.

Most people at Frontier have a day job somewhere else in CCS or the business. You can give an hour, a few hours a week for six weeks, or a whole hack day.

**Raise an idea**
Tell us a problem worth solving.

**Be a tester**
Try a new tool on safe data and tell us what works. Two to four hours a week for six weeks.

**Bring a problem to Frontier Friday**
Fortnightly, 12:00. Ten minutes to pitch, twenty to work on it together.

Events

All events

Date	Event Name	Time/Location
OCT 17	Frontier Friday: demos from four experiments	12:00 · Teams and Room 4.12
NOV 6	Hack day: letters customers can read	09:30 · Halifax, all day
NOV 20	Show and tell with Insurance Operations	14:00 · Teams
DEC 4	Design sprint taster	10:00 · Teams, 90 minutes

Frontier champions

One in every Lab. Talk to them about an idea, a method or joining an experiment.

The diagram illustrates four Champion Labs, each represented by a colored circle with a label and a description:

- AO** (Automated Operations Lab): A red circle with the text "AO" inside. To its right, the text "[Name] Champion · Automated Operations Lab" is displayed.
- 24** (24x7 Services Lab): An orange circle with the text "24" inside. To its right, the text "[Name] Champion · 24x7 Services Lab" is displayed.
- CT** (Colleague Tooling Lab): A blue circle with the text "CT" inside. To its right, the text "[Name] Champion · Colleague Tooling Lab" is displayed.
- DI** (Data & Insights Lab): A teal circle with the text "DI" inside. To its right, the text "[Name] Champion · Data & Insights Lab" is displayed.

▼ How much time will it take?

A tester gives two to four hours a week for six weeks; a hack day is one day; Frontier Friday is one hour. Agree it with your line manager first; we send them a short note explaining the commitment.

► Do I need to be technical?

► What do I get out of it?
