Service

Keeping the estate live, and turning the work that drains us into automation of its own.

Toil ledger

Ranked by hours saved against effort to remove. Freed hours become capacity the team decides how to spend.

Toil item ▾	Hours a month ▾	Effort ▾	Rank ▾	Status ▾
Manual queue restarts after overnight failures	42	S	1	In build
Certificate renewals on runtime machines	18	XS	2	Next
Reworking cases with missing data	26	M	3	Next
Credential rotation	9	S	4	Not started
Weekly health report assembly	6	XS	5	Done

Requests waiting

From the front door on the business site. Triage happens in the Requests list (Triage view); this shows what is waiting and for how long.

Request	Type	Solution	Squad	Waiting
Claims bot skipped cases with a missing policy number	Problem	DW-Claims-01	Service	2 days
Run the KYC refresh overnight instead of 9am	Change	DW-KYC-03	Service	5 days
Death claim notifications	New idea	–	Product Owner	1 day

Microsoft Power BI

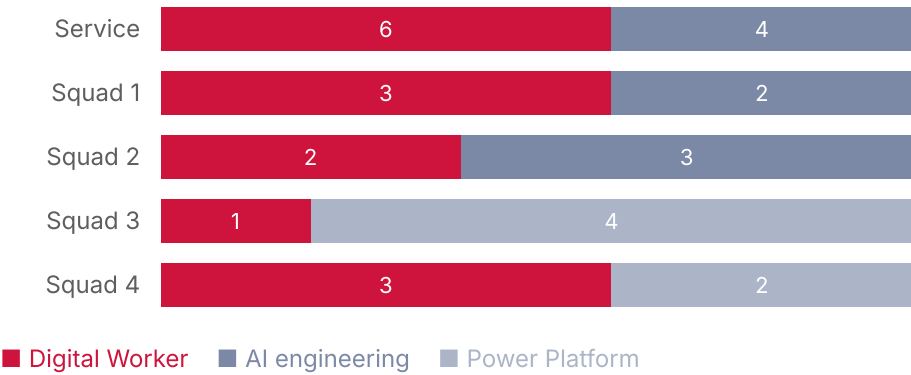

Where our skills sit on the Dreyfus scale, and what each of us is working on next. Competent is the baseline for anything you work in regularly.

People at each level, from Liftoff self-assessments

Domain	Novice	Adv. beginner	Competent	Proficient	Expert
Blue Prism	1	3	8	12	5
Power Platform	3	5	8	3	1
Agents and workflows	5	8	5	3	1
Python services	5	5	5	1	0
Google Cloud services	3	5	3	1	0
Observability	5	5	3	1	1
Process analysis	1	3	8	5	3

Ways of working

The standards we hold each other to. If it is not here, ask before you invent it.

Gates and the evidence each one needs

Gate	Question	Evidence to pass	Who signs
Qualified	Is it worth looking at?	Volume, time per case, fit	Product Owner
Viable	Does the case stack up?	Value, build and run cost, risk view	Lead Product Owner
Ready to build	Do we know enough to start?	Process map, data agreement, named owner, RAI sign-off if AI	Lead Solution Architect
Ready to test	Does it do what we said?	Test pack against real cases	Squad lead
Ready to release	Is it safe to go live?	Controls, support handover, run book	Engineering Lead
Sustained	Is it holding its value?	Monthly value and availability	Service Team lead

Sizing

Size	What it means
XS	A change to something already live
S	A new step or object on a proven pattern
M	A new process on platforms we already run
L	A new process that needs a new integration
XL	Several platforms, or a capability we don't have yet

No story points. No fixed dates. We commit to a size and a shape.

Delivery shapes

Demoable. Working on real cases early; the business shapes it with us.

Incremental. Value in slices, each live and counted before the next.

Long-build. Value at the end; progress shown through gate evidence.

Picking a shape: ask when the business first needs to see it working, then pick the shape that gets them there.

AI and decisions

Every AI use needs Responsible AI sign-off at F-grade before Ready to build.

Under the Data Use and Access Act, agents prepare and recommend; a colleague determines. Any design that automates a determination (for example, auto-redress) triggers Article 22C safeguards and needs Risk involved before Viable.

Code or release files leave our estate only through the sanitiser and with Information Security's written ruling.
